Disclosure

Speaker name: BAHAA AREFAI

I do not have any potential conflict of interest
• 60 Year old female
• Obesity, OSAS, depression
• Tonsillectomy in another center
• Hemorrhage
• Up to 4.5 hours clamping time
Results
Results
Conclusion

Iatrogenic lesion of internal carotid artery during tonsillectomy, is a rare and exceptional complication with a very challenging treatment. Endovascular approach has given us an excellent result, being less invasive than open surgery controlling the bleeding and restoring carotid flow.
THANK YOU
